

ChartWorld CIO+

No-Go areas overlay

The CIO+ No-Go areas overlay helps to automate the processes of defining No-Go areas in your ECDIS.

INTERTANKO highlights that ENC depth contours cannot explicitly separate safe and unsafe waters for specific vessel parameters.

The CIO+ No-Go areas overlay is delivered as a user chart with symbols indicating and highlighting dangers for navigation.

CIO+

CIO+ No-Go areas overlay benefits:

- Automatic application of No-Go areas on your ECDIS
- Made on the basis of recommendations provided in the INTERTANKO ECDIS Guidelines
- Prominent highlight of dangers in your ECDIS, calculated for vessel and voyage specific dynamic safety draft
- Additional alarm for dangerous objects, even if not required by ECDIS standards
- Automatic detection of additional navigational dangers during the voyage planning in ECDIS
- Automatic data delivery helps to reduce crew workload and avoid human errors
